

ABSTRACT OF THE DISCLOSURE

A three-dimensional image display device including at least one transmissive light-emitting display panel and a second light-emitting display panel located behind the transmissive panel. Each of the transmissive and second light-emitting display panels has patterned conductors each extending in a horizontal or vertical direction. Each patterned conductor includes a plurality of light-emitting portions and a bus line extending in the horizontal or vertical direction and bridged and connected to the light-emitting portions so that the light-emitting portions of patterned conductors are arranged in two dimensions. Each light-emitting portion includes a light-emitting layer made of an organic compound exhibiting electroluminescence. Each patterned conductor is formed into a zigzag.
